

Correctional Populations in the United States, 2016

Danielle Kaeble and Mary Cowhig, *BJS Statisticians*

An estimated 6,613,500 persons were under the supervision of U.S. adult correctional systems on December 31, 2016 (figure 1). The adult correctional population consists of persons held in prisons and jails and persons on probation and parole. The correctional population decreased 0.9% from January 1, 2016, to December 31, 2016. From 2007 to 2016, the correctional population declined by an average of 1.2% annually, ranging from a decrease of 0.4% in 2008 to 2.1% in 2010. At year-end 2016, about 1 in 38 persons in the United States were under correctional supervision.

This report summarizes data from several Bureau of Justice Statistics (BJS) collections on populations supervised by adult correctional systems in the United States. (See *Methodology*.)

HIGHLIGHTS

- In 2016, the number of persons supervised by U.S. adult correctional systems dropped for the ninth consecutive year.
- From 2007 to 2016, the portion of the adult population under supervision of U.S. correctional systems decreased by 18%, from 3,210 to 2,640 per 100,000 adult residents.
- The percentage of adults supervised by the U.S. correctional system was lower in 2016 than at any time since 1993.
- The incarceration rate has declined since 2009 and is currently at its lowest rate since 1996.
- On December 31, 2016, an estimated 6,613,500 persons were supervised by U.S. adult correctional systems, about 62,700 fewer persons than on January 1, 2016.
- About 1 in 38 adults (or 2.6% of persons age 18 or older in the United States) were under some form of correctional supervision at year-end 2016.
- The correctional population declined 0.9% during 2016 due to decreases in both the community supervision (down 1.1%) and incarcerated (down 0.5%) populations.
- The community supervision population fell from 4,586,900 on January 1, 2016, to 4,537,100 on December 31, 2016.
- All of the decrease in the community supervision population in 2016 was due to a decline in the probation population (down 52,500).
- The incarcerated population decreased slightly from 2,172,800 in 2015 to 2,162,400 in 2016.
- All of the decrease in the incarcerated population was due to a decline in the prison population (down 21,200), while the jail population remained relatively stable.

FIGURE 1
Total population under the supervision of U.S. adult correctional systems, 2006–2016

Note: Estimates may not be comparable to previously published BJS reports because of updated information or rounding. See *Methodology* for details.

Terms and definitions

Adult—persons subject to the jurisdiction of an adult criminal court or correctional agency. Adults are age 18 or older in most jurisdictions. Persons age 17 or younger who were prosecuted in criminal court as if they were adults are considered adults, but persons age 17 or younger who were under the jurisdiction of a juvenile court or agency are excluded. (See *Methodology* for more information on prisoners and local jail inmates age 17 or younger.)

Annual change—change in a population between two consecutive years.

Average annual change—average (mean) annual change in a population across a specific period.

Community supervision population—estimated number of persons living in the community while supervised on probation or parole.

Community supervision rate—estimated number of persons supervised in the community on probation or parole per 100,000 U.S. residents of all ages (i.e., total community supervision rate) or U.S. residents age 18 or older (i.e., adult community supervision rate).

Correctional population—estimated number of persons living in the community while supervised on probation or parole and persons under the jurisdiction of state or federal prisons or in the custody of local jails.

Correctional supervision rate—estimated number of persons supervised in the community on probation or parole, and inmates under the jurisdiction of state or federal prisons or in the custody of local jails per 100,000 U.S. residents of all ages (i.e., total correctional supervision rate) or U.S. residents age 18 or older (i.e., adult correctional supervision rate).

Imprisonment rate—estimated number of prisoners under state or federal jurisdiction sentenced to more than one year per 100,000 U.S. residents of all ages (i.e., total imprisonment rate) or U.S. residents age 18 or older (i.e., adult imprisonment rate). This statistic does not appear in this report; see *Prisoners in 2016* (NCJ 251149, BJS web, January 2018).

Incarcerated population—estimated number of persons under the jurisdiction of state or federal prisons, and those in the custody of local jails.

Incarceration rate—estimated number of persons under the jurisdiction of state or federal prisons, and those in the custody of local jails per 100,000 U.S. residents of all ages (i.e., total incarceration rate) or U.S. residents age 18 or older (i.e., adult incarceration rate).

Indian country jail population—estimated number of inmates held in correctional facilities operated by tribal authorities or the Bureau of Indian Affairs (BIA), U.S. Department of the Interior. These facilities include confinement facilities, detention centers, jails, and other facilities operated by tribal authorities or the BIA. (See *Jails in Indian Country, 2016*, NCJ 250981, BJS web, November 2017.)

Local jail population—estimated number of inmates held in confinement facilities operated under the authority of a sheriff, police chief, or city or county administrator. They are intended for adults but may hold juveniles before or after they are adjudicated. Facilities include jails, detention centers, city or county correctional centers, special jail facilities (such as medical or treatment centers and pre-release centers) and temporary holding or lockup facilities that are part of the jail's combined function. Inmates sentenced to jail facilities usually have a sentence of one year or less. (See *Jail Inmates in 2016*, NCJ 251210, BJS web, February 2018.)

Military prison population—estimated number of service personnel incarcerated under the jurisdiction of U.S. military correctional authorities (see appendix table 2).

Parole population—estimated number of persons who are on conditional release in the community following a prison term while under the control, supervision, or care of a state or federal correctional agency. Violations of the conditions of supervision during this period may result in a new sentence of confinement or a return to confinement for a technical violation. This population includes parolees released through discretionary (i.e., parole board decision) or mandatory (i.e., provisions of a statute) supervised release from prison, those released through other types of post-custody conditional supervision, and those sentenced to a term of supervised release.

Prison population—estimated number of prisoners incarcerated in a long-term confinement facility run by a state or the federal government, which typically holds felons and offenders with sentences of more than one year, although sentence length may vary by jurisdiction.

Prison jurisdiction population—estimated number of prisoners under the jurisdiction or legal authority of state or federal correctional officials, regardless of where the prisoner is held. This population represents BJS's official measure of the prison population and includes prisoners held in public or private prisons,

penitentiaries, correctional facilities, halfway houses, boot camps, farms, training or treatment centers, and hospitals. Counts also include prisoners who were temporarily absent (fewer than 30 days); in court or on work release; housed in privately operated facilities, local jails, or other state or federal facilities; and serving concurrent sentences for more than one correctional authority.

Prison custody population—estimated number of prisoners held in the physical custody of state or federal prisons regardless of sentence length or the authority having jurisdiction. This population includes prisoners housed for other correctional facilities but excludes those in the custody of local jails, held in other jurisdictions, out to court, or in transit from one jurisdiction of legal authority to the custody of a confinement facility outside that jurisdiction. Prisoners based in private facilities are excluded from custody counts unless otherwise specified (see appendix table 3).

Probation population—estimated number of persons who are on a court-ordered period of supervision in the community while under the control, supervision, or care of a correctional agency. The probation conditions form a contract with the court by which the person must abide to remain in the community, generally in lieu of incarceration. In some cases, probation may be a combined sentence of incarceration followed by a period of community supervision.

Often, probation entails monitoring or surveillance by a correctional agency. In some instances, probation may not involve any reporting requirements.

Territorial prison population—estimated number of prisoners in the custody of correctional facilities operated by departments of corrections in U.S. territories (American Samoa, Guam, and the U.S. Virgin Islands) and U.S. commonwealths (Northern Mariana Islands and Puerto Rico) (see appendix table 2).

Methodology

Sources of data

The statistics presented in this report include data from various Bureau of Justice Statistics (BJS) data collections. Each collection relies on the voluntary participation of federal, state, and local respondents. For more information about the following data collections, see the Data Collections page on the BJS website.

Annual Probation Survey and Annual Parole Survey.

BJS's Annual Probation Survey and Annual Parole Survey (ASPP), which began in 1980, collect data from U.S. probation and parole agencies that supervise adults. These data collections define adults as persons subject to the jurisdiction of an adult court or correctional agency. Juveniles sentenced as adults in a criminal court are considered adults. Juveniles under the jurisdiction of a juvenile court or correctional agency are excluded.

The two surveys collect data on the number of adults supervised in the community on January 1 and December 31 each year, the number of entries and exits to supervision during the reporting year, and characteristics of the population at year-end. See appendix table 1 for detailed data. Both surveys cover all 50 states, the District of Columbia, and the federal system. BJS depends on the voluntary participation of state central reporters and separate state, county, and court agencies for these data.

Annual Survey of Jails. The Annual Survey of Jails (ASJ) has collected data from a nationally representative sample of local jails each year since 1982, except 1983, 1988, 1993, 1999, and 2005 when a complete census of U.S. local jails was conducted. Jails are confinement facilities usually administered by a local law enforcement agency that are intended to hold adults. They may also hold youth age 17 or younger before or after they are adjudicated. The 2016 ASJ was a stratified probability sample of 875 active jail jurisdictions nationwide. The ASJ data used in this report include inmates age 17 or younger who were held either before or after they were adjudicated (about 3,700 persons at year-end 2016).

To maintain the jail series in this report, all tables and figures that include national estimates of the local jail population as of the last weekday in June were provided through the ASJ, except in 2005 when a jail census was completed (see Census of Jails). Because the ASJ is designed to produce only national-level estimates, tables and figures in this report that include jurisdiction-level counts of the incarcerated population and the total correctional population were based on jail data collected

through the Deaths in Custody Reporting Program. The Deaths in Custody Reporting Program provides the population of jail inmates confined as of December 31.

Census of Jails. The Census of Jails began in 1970 and was conducted in 1972, 1978, 1983, 1988, 1993, 1999, 2005, and 2006. In 2013, BJS expanded the 2013 Deaths in Custody Reporting Program—Annual Summary on Inmates under Jail Jurisdiction form to act as the 2013 Census of Jails. The census is designed to produce a complete enumeration of jail facilities in the United States. It is part of a series of data collection efforts, including the Census of Jail Inmates and the Census of Jail Facilities, aimed at studying the nation's jails and their inmate populations. The reference date of the 2013 census was December 31, while the reference date for prior iterations was the last weekday in June within the reference year.

Deaths in Custody Reporting Program. The Deaths in Custody Reporting Program (DCRP) is an annual collection that provides national-, state-, and incident-level data on persons who died while in the physical custody of the 50 state departments of corrections (DOCs) or the approximately 2,900 local adult jail jurisdictions nationwide. In an attempt to reduce respondent burden for the 2013 iteration, BJS combined the 2013 DCRP collection with the 2013 Census of Jails. For more information, see *Census of Jails and Census of Jails: Population Changes, 1999–2013* (NCJ 248627, BJS web, December 2015).

The DCRP began in 2000 in response to the Death in Custody Reporting Act of 2000 (P.L. 106-297) and is the only national statistical collection to obtain comprehensive information about deaths in adult correctional facilities. In addition to the death count, BJS requests that jails provide summary statistics about their population and facility admissions. All jails, including those with no deaths to report (about 80% of jails in any given year), are asked to complete the annual summary form.

In appendix table 1, BJS uses the local jail counts from the 2016 DCRP to generate jurisdiction-level estimates of the total incarcerated and correctional populations. Because of this, the total correctional and incarcerated populations in appendix table 1 do not match the totals reported in other tables and figures in this report.

National Prisoner Statistics Program. The National Prisoner Statistics (NPS) program began in 1926 under a mandate from Congress and is conducted annually. It collects data from the nation's 50 state DOCs and the Federal Bureau of Prisons (BOP). The NPS distinguishes between prisoners in custody and prisoners under the jurisdiction of correctional authorities. To have custody of a prisoner, a state or the BOP must physically hold that prisoner in one of its facilities. To have jurisdiction over a prisoner, the state or BOP must have legal authority over that prisoner, regardless of where the prisoner is incarcerated or supervised. Some states were unable to provide counts that distinguish between custody and jurisdiction.²

Except for appendix table 3, the NPS prisoner counts in all tables and figures of this report are consistent with the jurisdiction counts and findings reported in *Prisoners in 2016* (NCJ 251149, BJS web, January 2018). The jurisdiction counts represent BJS's official measure of the prison population and include persons held in prisons, penitentiaries, correctional facilities, halfway houses, boot camps, farms, training or treatment centers, and hospitals. They also include prisoners who were temporarily absent (fewer than 30 days), in court, or on work release; housed in privately operated facilities, local jails, or other state or federal facilities; and serving concurrent sentences for more than one correctional authority.

The NPS prisoner custody counts are only reported in appendix table 3 and include all prisoners held within state and federal facilities, including those housed for other correctional facilities, prisoners held in privately operated facilities, prisoners age 17 or younger who were serving time in a state or federal correctional facility after being sentenced in criminal court as if they were adults (about 1,000 persons in 2016), and those in the six states in which prisons and jails form an integrated system, including persons age 17 or younger who may have been held before or after adjudication.

Through the annual NPS collection, BJS has obtained year-end counts of prisoners in the custody of U.S. military authorities from the Department of Defense Corrections Council since 1994. In 1994, the council, comprising representatives from each branch of military service, adopted a standardized report (DD Form 2720) that obtains data on prisoners held in U.S. military confinement facilities inside and outside of the continental United States (see appendix table 2).

²See *Jurisdiction notes* in *Prisoners in 2016* (NCJ 251149, BJS web, January 2018) to determine which states did not distinguish between custody and jurisdiction counts.

Since 1995, through the annual NPS collection, BJS has collected year-end counts of prisoners from DOCs in the U.S. territories (American Samoa, Guam, and the U.S. Virgin Islands) and U.S. commonwealths (Northern Mariana Islands and Puerto Rico). These data represent all prisoners in the custody of prison facilities in the U.S. territories or commonwealths (see appendix table 2). See *Prisoners in 2016* (NCJ 251149, BJS web, January 2018) for more statistics and information, including nonresponse.

Survey of Jails in Indian Country. The Annual Survey of Jails in Indian Country (SJIC) has been conducted annually since 1998, except in 2005 and 2006. The SJIC collects detailed information on all adult and juvenile confinement facilities, detention centers, jails, and other facilities operated by tribal authorities or the U.S. Department of the Interior's Bureau of Indian Affairs (see appendix table 2). See *Jails in Indian Country, 2016* (NCJ 250981, BJS web, December 2017) for more statistics and information.

Counts adjusted for offenders with dual correctional statuses

Offenders under correctional supervision may have dual correctional statuses for several reasons:

- probation and parole agencies may not always be notified immediately of new arrests, jail admissions, or prison admissions
- absconders included in a probation or parole agency's population in one jurisdiction may actually be incarcerated in another jurisdiction
- persons may be admitted to jail or prison before formal revocation hearings and potential discharge by a probation or parole agency
- persons may be serving separate probation and parole sentences concurrently
- state and federal prisons may hold prisoners in county facilities or local jails to reduce crowding in their prisons.

In 1998, through the Annual Probation Survey and Annual Parole Survey, BJS began collecting data on the number of probationers and parolees with dual correctional statuses and has since expanded on the information collected. In 1999, BJS began collecting data on the number of prisoners under the jurisdiction of state or federal prisons who were held in county facilities or local jails in the NPS (**table 5**). Table 5 includes adjustments that were made to the total correctional

The components $[P1 \times ((1/GP1) - (1/GP0))]$ and $[P0 \times ((1/GP1) - (1/GP0))]$ provide the change due to the U.S. adult resident population. These two components were summed, and the average was used to estimate the amount of change in the correctional supervision rate attributed to the change in the U.S. adult resident population during the period.

Nonresponse adjustments to estimate population counts

Probation, parole, jail, and prison populations

Probation, parole, jail, and prison population counts were adjusted to account for nonresponse across data collections. The methods varied and depended on the type of collection, type of respondent, and availability of information. For more information on the nonresponse adjustments implemented to generate national- and jurisdiction-level estimates of the probation, parole, and prison populations, see *Prisoners in 2016* (NCJ 251149, BJS web, January 2018) and *Probation and Parole in the United States, 2016* (NCJ 251148, BJS web, March 2018). For more information on the nonresponse adjustments implemented to generate national counts of the jail population in the tables and figures of this report that include national estimates, see *Jail Inmates in 2016* (NCJ 251210, BJS web, February 2018).

Jail population—jurisdiction-level estimates

Nonresponse in the 2015 and 2016 DCRP was minimal. The unit response rate to the 2015 DCRP was 98.5% and 97.4% for the 2016 collection at the time of this report. Because the DCRP data collection used a census design (no sampling), each jail was initially self-representing and had a design weight of 1. To reduce nonresponse bias, responding jails had their weight adjusted via post-stratification to allow their responses to represent jails that did not respond. The description of the weighting used in the 2015 and 2016 DCRP is described using 2016 as the example.

Control totals for the 2016 confined jail population from the DCRP were estimated at the state level as follows:

- The year-to-year change in confined jail population among respondents to both the 2015 and 2016 DCRP was computed within the state.
- Estimated 2016 values were calculated by multiplying the yearly change rate and the 2015 DCRP estimate of confined population for jails that did not respond to the 2016 DCRP.

- The sum of reported, item-imputed, and DCRP-estimated values for the 2016 confined jail population for each state served as the control totals for the post-stratification procedure.
- The post-stratification weight adjustment factor was identical for all jails within a state and was computed as the ratio of the control total for state i to the sum of the reported and item-imputed 2016 DCRP confined jail population values for state i :

$$PSAdj_i = \frac{Control\ total_i}{\sum_{j=1}^{n_i} Reported\ confined_j + Item\ imputed\ confined_j}$$

The final analysis weight is the product of the design weight and the post-stratification adjustment factor. Because the design weight was 1 for all jails, the analysis weight is equal to the adjustment factor.

Comparability of jurisdiction-level estimates over time

All jurisdiction-level estimates included in this report are based on data reported within the reference year. Some jurisdictions update their population counts for different reasons after submitting their data to BJS. Updated population counts usually include data that were not entered into the information system before the survey was submitted or data that were not fully processed by year-end.

Also, some jurisdictions have experienced reporting changes for one correctional population collection or more over time. These changes may result due to making administrative changes (such as consolidating databases or implementing new information systems that result in data review and cleanup), reconciling offender records, reclassifying offenders (including those on probation to parole and offenders on dual community supervision statuses), and including certain subpopulations that were not previously reported.

For these reasons, comparisons between jurisdictions and comparisons between years for the same jurisdiction over time may not be valid. More detailed information about updates and reporting changes that impact the ability to make jurisdiction-level comparisons over time may be found in the source reports for each of the four correctional populations, such as the *Probation and Parole in the United States* or *Prisoners* series, within the particular reference year.

The Bureau of Justice Statistics of the U.S. Department of Justice is the principal federal agency responsible for measuring crime, criminal victimization, criminal offenders, victims of crime, correlates of crime, and the operation of criminal and civil justice systems at the federal, state, tribal, and local levels. BJS collects, analyzes, and disseminates reliable and valid statistics on crime and justice systems in the United States, supports improvements to state and local criminal justice information systems, and participates with national and international organizations to develop and recommend national standards for justice statistics. Jeffrey H. Anderson is director.

This report was written by Danielle Kaeble and Mary Cowhig. Stephanie Mueller verified the report.

Caitlin Scoville and Jill Thomas edited the report. Tina Dorsey produced the report.
